

> Profile

I build systems that make other systems work better. At **Jenny Internet**, I design and develop internal software — ticket automation workflows, Chrome extensions for support agents, file management tools — that keep **60+ corporate networks** and their support teams running efficiently.

**CompTIA A+** and **Network+** certified. Diploma in Information Technology — Systems Development in progress at Boston City Campus. Previously deployed network infrastructure for Ackermans, Pick n Pay, Builders Warehouse and others. Built **BLE macro keyboards**, **RFID tools**, and **custom Linux kernels** on the side.

If it's repetitive, I automate it. If it doesn't exist yet, I build it.

```
$ echo "shahidsingh1zn@gmail.com"    $ cat github.com/sudobreakstuff    $ download resume.pdf
```
